No. 1s the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Cell Biol. 8: 541-5544 1989). The fragment obtd was amplified by BekMA (AAO23619) and BekIB (AAO23620) primers, and the obtd. Kull Length bek clone was subs-equently sequenced and the protein sequence deduced. Receptor proteins encoded by this coMA sequence may be used in pharmaceutical compans. to inhibit undesirable heparin-binding growth factor mediated cellular responses or to inhibit the binding of an opportunistic particular in the sequence of the sequence 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cornes proliferation; in vivo; hepatocyte growth factor; injury; PCR; keratinocyte growth factor; ocular surgery; epithelium; endothelium; expression; receptor; polymerase chain reaction; amplification; primer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The oligonucleotide 3'mbek was used screen a one day old human brain stem library as it is complementary to the 3' end of the

                                                         The invention relates to methods for promoting corneal cell proliferation in vivo by treating the cells with hepatocyte growth factor (HGF) and optionally keratinocyte growth factor (KGF). Methods for suppressing corneal cell growth include administring Calons to the
                                                                                                                                                                                                                                                                                                                                                                                                                              Promoting or suppressing corneal cell proliferation - using hepanocyte growth factor or calcium lons resp. e.g. for treating corneal injury or for preserving corneal tissue prior to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US5589451-A

                                                                                                                                                                                                                                                                                                                                                                                                                   following accidental injury, ocular surgery or due to corneal disorders caused by abnormal healing processes of the corneal epithelium and endothelium. The methods are based on the discovery that corneal tissue can express mRNA for HGF, KGF and their respective receptors. The discovery was shown by PGR amplification using the primers AMT63273-87. This probe is used to detect the 205 bp fragment amplified from the fibroblast growth factor (FGF) receptor 2 CDNA by primers AMT63283 and AMT63286. The probe corresponds to nucleotides 30-59 of the FGF receptor
                                                                                                                                                                                                                               1242 GATTGAGGTTCTCTATATTCGGAATGTAAC 1271

Inhibition of corneal cell differentiation - by using hepatocyte
growth factor and/or keratinocyte growth factor

Example 1; Columns 17-18; 36pp; English.

The present sequence was used in the development of a novel method for the inhibition of corneal epithelial cell differentiation. The mathod comprises contacting the cells with a hepatocyte growth factor (REF) and/or kertinocyte growth factor (REF) and/or kertinocyte growth factor (REF) and/or kertinocyte growth factor (REF) and a timed sequentially or simultaneously. The HEF and/or KEF is in a timed release delivery system, especially comprising blodegradable polymen microcopsules. The HEF and/or KEF are administered optionally. The method is used for treating dry eye, especially keratoconjunctivitis sicca.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        mRNA, and each labeled NA is generated using a single gene specific prime. The method is useful for producing a sub-repulation of labeled NAs which is useful for analysing the differences in the RNA profiles
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           producing sub-population of labeled nucleic acids, useful for analysing differences in RNA profiles between several different physiological sources, using set of distinct gene specific primers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2002-314699/35

The invention relates to producing a sub-population of labeled nucleic cacids (NAS) comprising contracting a NA sample from a physiological cacids (NAS) comprising contracting a NA sample from a physiological cacids (NAS) comprising contacting a NA sample from a physiological cacids (NAS) comprising the population of NAS, where cachignes specific primer has a sequence complementary to a distinct many and each labeled NA is generated using a single gene specific CC mRNA, and each labeled NA is generated using a single gene specific CC primer. The method is useful for ronalysing the differences in the RNA profiles between several different physiological sources, where the method CC comprises producing subpopulation of labeled NAS for each physiological corres, comprising the population, where the comparison comprises producing subpopulation of labeled NAS for each of the physiological sources, comprising the population, where the comparison comprises producing subpopulation of labeled NAS for each of the sources, comprising the population, where the comparison control of the sources, comprising the population, what stably concept to identify differences in the population, what stably concept to identify differences in the population, what stably concept the sources, where differential gene expression assays are utilised in differential expression analysis of diseased a normal cutisue cy, neoplastic a normal tissue, or different tissue or subtissue types. The present sequence is a human gene specific PCR primer used in the method of the invention.

Note: The sequence data for this patent did not form part of the patent directly from USPTO at human security and account of the patent of the necture of the patent o

                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents an oligonucleotide used to test a DNA controlled usassy for assessing interaction between receptors and colligings. The invention relates to a method for the characterisation of biological samples; and comprises detecting the binding of individual members of a library of molecular probes to molecular components in the sample. The method comprises: (a) contacting the sample with a library of molecular probes to allow them to bind to their specific binding of the conjugation of molecular probes to molecular components in the sample using a bibrary of molecular probes to molecular components in the sample using a conjugation of molecular probes to molecular components in the sample to the conjugation of molecular probes to molecular components in the sample. The method can be used for characterising biological samples for the method can be used for characterising biological samples for conjugation be used for characteristic bidder to the sample conjugation of the sample molecular component such as probeins, glycoproteins, polymucleotides, can be used for characteristic bidder to a patient and for conjugation to describe a diagnosting a disease or condition in a patient and for constitution such as diabetes, infectious disease, inflammatory disease, heart disease, neplastic disorders, autoimmune disease and xx
                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

The fragment obtd. was amplified by BekAA and BekIB (AAQ23620) primers, and the obtd. was amplified by BekAA and cell biol. 9: 641-654 1988. The fragment obtd. was amplified by BekAA and cell biol. 9: 641-654 1989. The fragment obtd. was amplified by BekAA and cell biol. 9: 641-654 1989. The sequence deduced. Receptor proteins cell biol. 9: 641-654 1989. The sequence may be used in platmaceutical compans. to inhibit undesirable heparin-binding growth factor mediated cellular responses or to inhibit the binding of an opportunistic pathogen to human cells. Such undesirable responses may be growth factor stimulated consideration. Such undesirable responses may be growth factor stimulated consideration. The derived bek protein may also be used for screening drugs.

```
The invention relates to the identification of nucleic acid molecules (AAI29513-AAI31314) from the human genome which include polymorphic sites which can predispose individuals to disease. Various genes from a number of individuals were resequenced and single nucleotide polymorphisms (SNPs) in these genes discovered. The method is useful for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. containing the polymorphic sites may be useful in forensics and paternity
testing.

determining predisposition to cancer and for development of drugs Novel variants of the human mismatch repair gene, MSH6, useful e.g. for

Disclosure; Fig 3; 14pp; German.

This invention describes a novel method of determining a predisposition cc to disease by genotyping a subject's DNA sequence (A) of the human cc mismatch repair gene, MSHG at specified positions and comparing with creference DNA sequences, optionally taking into account all possible combinations of variations of the individual mutations. Including any chosen absolute number of variations. (A), and analysis of their combinations of relations in Following: (1) determining a predisposition of the disease, especially colorectal, endometrial and overlan carcinoma and to disease, especially colorectal, endometrial and overlan carcinoma and clukenia; (ii) determining an increased mutation rate (frequency of base substitutions, insertions and/or deterions) in subaryotic cells; (iii) copplastic disease; (iv) the development of therspectic and 'life-sayle' complastic disease; (iv) the development of therspectic and 'life-sayle' complastic disease; (iv) the development of therspectic and 'life-sayle' complastic disease; (iv) the development of therspectic and 'life-sayle' complastic (vi) optimizing individual treatments and interventions against complastic (vii) controlling the mutation rate in enkaryotic cells, in vitro or in vivo; (viii) constructing genes and vectors, particularly for

                                                                        used in the method of the invention. The invention provides a new solid support for the immobilisation of nucleotide sequences. The support molecule is a diol linked to a controlled pore glass particle (CREP), by a phosphodiester bond. Oligonucleotides can then be linked to the diol, by linkage to the free hydroxyl groups of the diols. A protected nucleotide segment can then be linked to the diol-linked oligonucleotide by tandem ligation. This method can also be used as a continuous source by tandem ligation.
by tandem ligation. This method can also be used as a continuous source of supply for pre-determined, frequently used oligonucleotides, such as universal primers and diagnostic probes. The immobilized sequences can be used for e.g. gene detection, diagnostic assays, priming of enzymatic
                                                                                                                                                                                                                                The sequences represented by AAT05795 and AAT05796 are oligonucleotides used in the method of the invention. The invention provides a new solid

Or this invention describes a novel method for obtaining a set of the bialistic markers represented in ANX3233-X25622 and ANX22833-X25843 for use in constructing a high density equilibrium map of the human genome. The method involves (a) obtaining a nucleic acid library comprising CC genomic DNA fragments comprising the full genome or a portion of the method involves (a) obtaining a nucleic acid library comprising CC (b) determining the order of genomic DNA fragments of the genomic DNA fragments and (d) identifying nucleotides in the genomic DNA fragments (c) determining the sequence of selected regions of the genomic DNA fragments and (d) identifying nucleotides in the genomic DNA fragments which vary between individuals, thereby defining a set of bialislic CC markers, the methods can be used for identifying traits such as disease. CC (e.g., Alzabelmer's disease, of the genome (preferably the human genome). The sequences described in a genome (preferably the human genome). The sequences described in a from the interval of the preferably the human genome of the processor of the method of the processor of the processor of the method of the processor of the proce

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     drug toxicity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            30-JUN-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAX52549;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DNN synthesis, isolation and purification of DNN binding proteins. The advantage with this method is that the sequences can be supported to the control of the protected simply by using a solution of Naou, whereby the oligonucleotides remain attached to the solid phase and the integrity of the nucleotide strand is unaffected. This method is also faster and more efficient than
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WO9904038-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human genome; biallelic marker; high density disequillibrium map; genomic map; haplotypo; phonotype; polymorphic base; genotyping; haplotyping; hybridisation; identification; characterisation; diagnosis; single nucleotide polymorphism; SNP; ds.
                                                                                                                                                                               ANZ6554 to ANX6979 represent human biallelic markers from the present invention; which contain a polymorphic base at position 24 of their nucleotide sequences. ANZ69579 to ANZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses; they can be used for high density mapping of the human genome, and in complex association studies and haphotyping studies which are useful in determining the genetic basis for disease studies which are useful in determining the penetic basis of disease states, compositions and methods of the invention can also be useful for the identification of the torques for the development of pharmaceutical agents and disgnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents agents acting on a disease as well as the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human map-related biallelic marker SEQ ID NO:1341.

```

Pred. ö is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

### RESULT 11 HUMKSAMIII LOCUS DEFINITION

HUMKSANIII

3244 bp mRNA linear PRI 06-JAN-1995
HUMAG Secreted fibroblast growth factor receptor (K-sam-III) mRNA,
complete cds.
